CLAIMS

- 1. A method for treating stroke said method comprising:
- a) administering a defibrinogenating agent to a patient in need of such treatment at a rate sufficient to achieve rapid initial defribrinogenation;
- b) ceasing administration of said defibring enating agent after about 15 min to 12 hours; and
- b) allowing normalization of fibrinogen levels to occur without further administration of said defibrinogenating agent.
- 2. The method of claim 1, wherein initial defibring enation occurs at a rate of ≥20mg/dL/hr.
- 3. The method of claim 1, wherein initial defibring enation occurs at a rate of ≥30 mg/dL/hr.
- 4. The method of claim 4, wherein the defibring enating agent is ancrod.
- 5. The method of claim 1 wherein the defibring agent is administered as a single dose of about 0.05- 1.25 IU/kg/hr.
- 6. The method of claim 1 wherein the defibring agent is administered as a single dose of about 0.1- 0.2 IU/kg/hr.
- 7. The method of claim 1 wherein the defibring agent is administered as a single dose at a rate of about 0.14-0.175 IU/kg/hr.
- 8. The method of claim 1 where the defibring enating agent is administered intravenously.

- 9. A method for treating stroke said method comprising:
- a) administering a defibrinogenating agent to a patient in need of such treatment at a rate of about 0.10-1.5 IU/kg/hr;
- b) ceasing administration of the defibrinogenating agent after about 15 min to 12 hours; and
- c) allowing normalization of fibrinogen levels to occur without further administration of said defibrinogenating agent.
- 10. The method of claim 9 wherein said defibring agent is administered from about 30 minutes to 6 hours.
- 11. The method of claim 9 where the defibring enating agent is administered intravenously.
